WORK EXPERIENCE

PwC UK Manager/Cloud Solution Architect

June 2022 – Present

London, UK

- Responsibilities included gathering customer requirement, architecting, developing and delivering solutions.

Microsoft Cloud Solution Architect

July 2019 – May 2022

London, UK

- Worked with customers to **plan, deploy, operate and optimize** their modern cloud applications and helped them in accomplishing their business needs.
- Synthesized **customer feedback** to facilitate continuous product/services improvement in close co-operation with Product/Engineering teams.
- Worked on an engagement where a customer was **modernizing** their application, I helped them understand the various Azure services available for their **application migration**. One Key service was Azure Cosmos DB. I educated the customer development team on **Cosmos DB**, helped them with writing SQL api queries and **performance optimization** of the database. As a result, this customer was able to optimize the cost of services running in Azure.
- Delivered series of **workshops and sessions** focusing on various Azure services. I delivered a session to their **SLT team**, where I helped them in understanding the capabilities of Azure Security Center via live demos. This has resulted in successfully setting up **Azure security centre** for customer's environments. I delivered sessions/workshops around ARM templates, IaaS, **Azure DevOps**, Azure SQL, **Azure Data Studio** and Azure cosmos DB to upskill their developers and get on board quickly.
- Worked with one of my customer in **automating their workloads** in Azure.
- Delivered a workshop on '**Developing accessible applications**'. This workshop helped customer understand what accessibility is and what it means in web and mobile application development. In this **workshop**, I created demos to show the common accessibility issues, various tools that can be used to identify the defects. I created a hands-on lab exercise to practice attendees on **accessibility** defects. This workshop is the perfect example of inclusiveness, where we educate the attendees to create applications **accessible to everyone**.
- While working with one of the customers I delivered multiple sessions on **PowerBI**, Azure DevOps pipelines, **security & permissions**, Azure Data Factory, **Azure SQL** deployment. This has resulted in a successful Data factory orchestration for the customer. I took the product feedback from the customer and worked with our Engineering team in product enhancement.

SKILLS

SQL Azure

Cosmos DB

Azure DevOps

Power BI

PowerShell

Azure Data Factory

Agile / Scrum

Data Mesh

.net (C#)

Azure Web/ Compute

HONOR AWARDS

- Team Star Award
